Presentation	Content Team members have drafted their project, including the following: / Selected topic / Reason why they selected their topic / Re	30	Content The presentation outlines the project, including the following: / Selected topic / Reason why they selected their topic / Description of their source of data / Description of the data exploration phase of the project / Description of the analysis phase of the project Stides Presentations are drafted in Google Slides.	15	Content The presentation tells a story about their project, including the following:	15	Content The presentation tells a cohesive story about their project, including the following: Selected topic A Beason why they selected their topic Description of their source of data Ouestions they hope to answer with the data Description of the data exploration phase of the project Description of the data exploration phase of the project Description of the data exploration phase of the project Description of the data exploration phase of the project Recommendation for future analysis A nighting the team would have done differently Stides Presentations are finalized in Google Sides. Sides are primarily images or graphics (rather than primarily text) Images are clear, in high-definition, and directly illustrative of subject matter Live Presentation All team members greatent in equal proportions All team members greatent in equal proportions The presentation falls within any time limits provided by instructor Submission includes speaker notes, flashcards, or a video of the presentation rehearsal	25	Self-Assessment	Presents a cohesive written analysis that describes the role(s) they played over the course of the project and their contribution to the project in that role. Presents a cohesive written nummary of how they contributed to each of the roles they did not take on via team discussions, peer reviews, or other means. Additionally, the analysis should describe their greatest personal challenge over the course of the project, and how they overcame that challenge.	a 4
GitHub	Main Branch / includes a README.md README md README md README md README state include: / bescription of the communication protocols Individual Branches / At least one branch for each team member / Each team member has at least four commiss from the duration of the first segment Note: The descriptions and explanations required in all other project deliverables should also be in your README mad as part of your cutline, unless otherwise noted.	10	Main Branch All code in the main branch is production-ready. The main branch should include: - All code necessary to perform exploratory analysis - Some code necessary to complete the machine learning portion of the project README.md README.md README.md README.md must include: - Description of the communication protocols - Outline of the project (this may include images, but should be easly to flow and digest) Note: The descriptions and explanations required in all other project deliverables should also be in your README.md as part of your outline, unless otherwise noted branch for each team member - At least one branch for each team member - Each team member has at least four commits for the duration of the second segment (eight total commits per person)	10	Main Branch All code in the main branch is production-ready. Main branch should include: / All code necessary to perform exploratory analysis. Sene recessary to complete the machine learning portion of the project README and must include: README and must include: / Description of the communication protocols has / Description of the communication project (this may include images, but should be easy to follow and digest) / Link to Google Sides draft presentation Note: The descriptions and explanations required in all other project deliverables should also be in your README and sap and of your outline, unless otherwise noted. / At least one branch for each team member / Each team member has at least four commits for / Each team member has at least four commits for / Persons)		Main Branch All code in the main branch is production-ready. All code is clean, commented, easy to read, and adheres to a coding standard (e.g., PEP8) Main branch should include:	10	Team Assessment	Presents a cohesive written analysis that describes their learnwork, including all of the following: 7 Their communication protocol, including any challenges, how they were resolved, and what they would do afferently next time. 7 Their strengths as a team, including tips and tricks they would want to share with a new cohort kicking off the project.	3
Machine Learning Model	Team members present a provisional machine learning model that stands in for the final machine learning model and accomplishes the following: / Takes in data in from the provisional database / Outputs label(s) for input data	35	Team members submit the code for their machine learning model, as well as the following: / Description of preliminary data preprocessing / Description of preliminary feature engineering decision—making process / Description of how data was split into training and testing sets / Explanation of model choice, including limitations and benefits	30	Team members submit the working code for their machine learning model, as well as the following: / Description of data preprocessing / Description of data preprocessing / Description of feature engineering and the feature selection, including their desireshmaking feature selection, including their desireshmaking feature selection, including their desireshmaking / Description of how data was split into training and testing sets / Explanation of model choice, including limitations and benefits / Explanation of model choice, including limitations and benefits / Explanation of their selection of t	45	Team members submit the working code for their machine learning model, as well as the following: Description of data preprocessing Description of feature engineering and the feature selection, including the team's decision-making process Description of how data was split into training and testing sets Description of how data was split into training and testing sets Description of how data was split into training and testing sets Description of how decisions, including limitations and benefits Description of how model was trained (or retrained, if they are using an existing model) Description and explanation of model's confusion matrix, including final accuracy score Additionally, the model obviously addresses the question or problem the team is solving. Note: If statistical analysis is not included as part of the current analysis, include a description of how it would be included in the next phases of the project.	25	Summary of Project	Presents a cohesive, three- to four-sentence summary of the project that could be used on a Linkedin profile, in an intensive or cover letter, or as an elevator pitch, including all of the following: 7 Topic addressed / Machine module used / Results of the analysis	3
Database	Team members present a provisional database that stands in for the final database and accomplishes the following: Sample data that mimics the expected final database structure or schema. Virtual database structure or schema machine learning module is connected to the provisional database.	25	Team members present a fully integrated database. / Database stores static data for use during the project / Database interfaces with the project in some format (e.g., scraping updates the database, or database connects to the model.) / Includes at least two tables (or collections, if using MonggOID* / Includes at least two lables (or collections, if using MonggOIP* / Includes at least one join using the database.) / Includes at least one connection string (using SQLAlchemy or PyMongo) Note: If you use a SQL database, you must provide your ERD with relationships.	30	n/a		Team members present a final project with a fully integrated database. / Database stores static data for use during the project / Database interfaces with the project in some format (e.g., scraping updates the database, or database connects to the model) / Includes at least two tables (or collections, if using MongoDB) / Includes at least one join using the database language (not including any joins in Pandas) / Includes at least one join using the database language (not including any joins in Pandas) Note: If you use a SQL database, you must provide your ERD with relationships.	25			
Dashboard	n/a	0	A blueprint for the dashboard is created and includes all of the following: V Storyboard on Google Slide(s) V Description of the too(s) that will be used to create final dashboard V Description of interactive element(s)	15	The dashboard presents a data story that is logical and easy to follow for someone unfamiliar with the topic. It includes all of the following: I mages from the initial analysis Jobat (images or report) from the machine learning task At least one interactive element	30	The dashboard presents a data story that is logical and easy to follow for someone unfamiliar with the topic. It includes all of the following: I mages from the initial analysis Data (images or report) from the machine learning task At least one interactive element Either the dashboard is published or the submission includes a screen capture video of it in action.	15
